Gyógyítás Önökkel Kedvenceinkért!

STATEMENT AND PROCURATION

As the owner:

Name: _____ Phone No.: _____

Adress: _____ E-mail: _____

of the following animal:

Name: _____ Species: _____ Breed: _____

Sex: _____ Age: _____ Colour: _____

I was informed, I understood and accepted the necessity and the possible risks of the following procedure:

I was informed about the diagnostic possibilities that can lower the named risks, and according to my knowledge, my pet does not have any hidden illnesses (for example haemophilia, or allergies) that could alter the outcome of the procedure.

IMPORTANT INFORMATIONS

- You should not feed your animal 4-6 hours prior anaesthesia!
- You should inform your veterinarian about earlier illnesses, and operations of your pet!
- After anaesthesia, you should keep your pet in a closed, room-temperature place until it reaches full consciousness.
- Don't feed or drink your pet until it reaches full consciousness due to risk of aspiration!
- In the waking period vocalization, excitation, salivation and subtle shaking is possible.
- The waking time can vary between animals according to their breed, age, and general condition.
- After some operations, lethargy and loss of appetite is possible on the first couple of days.
- You should protect the wounds of your pet until sutures are removed, with the help of a collar, or post operative dress unless your veterinarian tells you otherwise.
- In case you notice abnormal symptoms (for example discharge, bleeding, or swelling of the wound, fever, unexpected lethargy, etc.), let your veterinarian know, and if necessary, show up for a control examination!
- Estimated cost of operation: _____ + Heartworm test price: _____
- Deposit of surgery: _____

I ask for an Idexx heartworm snap test performed from blood before anaesthesia:

YES

NO

The price of the operation does not contain the screening for heart-worm infection- please, ask for the test price at our clinic, at netvetkft@gmail.com , or check it on our website: www.netvet.hu (pricelist).
